

Computer Science: Programming			
Unit	Declarative Knowledge	Procedural Knowledge	Vocabulary
Yr 1 Programming A – Moving A Robot	<p>I understand that a program is a set of commands that a computer can run.</p> <p>I know that a command produces an outcome.</p> <p>I understand that a series of instructions can be issued before they can be enacted.</p>	<p>I can predict and then run my command on a floor robot.</p> <p>I can choose a series of commands that can be run as a program.</p> <p>I can build a sequence of commands that can be run as a program on a device</p>	<p>Bee-Bot, forwards, backwards, turn, clear, go, commands, instructions, directions, left, right, route, plan, algorithm, program.</p>
Yr 1 Programming B – Programming Animations	<p>I understand that a program is a set of commands that a computer can run.</p> <p>I know that a command produces an outcome.</p> <p>I understand that a series of instructions can be issued before they can be enacted.</p> <p>I know a list of step-by-step commands is a sequence.</p>	<p>I can choose a series of commands that can be run as a program.</p> <p>I can build a sequence of commands that can be run as a program on a device</p>	<p>ScratchJr, command, sprite, compare, programming, area, block, joining run, program, background, delete, reset, algorithm, predict, value, instructions</p>
Yr 2 Programming A – Robot Algorithms	<p>I know that a sequence is a series of instructions (commands).</p> <p>I know that a program is a sequence that can be run (executed).</p> <p>I understand that there is a different outcome when the order of the instructions is changed.</p> <p>I know that outcomes can be predicted before running (executing) a program.</p>	<p>I can predict and run a command on a given device.</p> <p>I can list commands, giving commands for a given purpose.</p> <p>I can choose a series of commands that can be run as a program, building a sequence of commands in steps.</p> <p>I can run a program on a device.</p>	<p>sequence, command, program, run, start, outcome, predict, blocks, design, actions, sprite, project, modify, change, algorithm, build, match, compare, debug.</p>
Yr 2 Programming B –	<p>I know that a sequence is a series of instructions (commands).</p> <p>I know that a program is a sequence that can be run (executed).</p>	<p>I can predict and run a command on a given device.</p> <p>I can list commands, giving commands for a given purpose.</p>	<p>sequence, command, program, run, predict, blocks, design, sprite, project, modify, algorithm, build, debug,</p>

Programming Animations	I understand that there is a different outcome when the order of the instructions is changed. I know that outcomes can be predicted before running (executing) a program.	I can choose a series of commands that can be run as a program, building a sequence of commands in steps. I can run and debug a program on a device	evaluate, decomposition, code.
Yr 3 Programming A	I know that a program includes sequences of commands. I understand that the order of commands can affect a program's output. I know that different sequences can achieve different outputs, or the same output.	I can build a sequence of commands. I can combine and order commands in a program .I can create a sequence of commands to produce a given outcome.	Debug, sequence, decompose, selection, repetition, variables, input, output, algorithms, programs, code, block-based coding, Scratch, sprite, staging area, code block, run, event block, control blocks
Yr 3 Programming B	I know that different sequences can achieve different outputs, or the same output. I understand that a program starts because of an input.	I know that a program includes sequences of commands. I understand that the order of commands can affect a program's output. I know that different sequences can achieve different outputs, or the same output.	Sequence, sprite, event, action, program, pen, stage, algorithms, selection, repetition, code, debug, output
Yr 4 Programming A Repetition in Shapes	I can understand and identify 'loops' of repeated code within programs as repeating sets of instructions. I know that looped code within programs can run for an indefinite amount of time, <i>or</i> for a specified number of times. I know and understand when to use a looped instruction in my program and justify its use.	I can use a count-controlled loop or an infinite (forever) loop to produce a specified output. I can plan a program that includes loops to produce a given outcome. I can create two or more sequences that can run at the same time.	Loops, count-controlled loops, infinite loops, repetition, algorithms, logo, input, output.
Yr 4 Programming B – Repetition in Games	I understand that a loop command can be used to repeat instructions in a program. I understand that you can program a loop to stop after a specific number of times. I understand the importance of instructional order in a loop, and understand when to use	I can use an infinite (Forever) loop in a program, to produce a given outcome. I can use a count-controlled loop (e.g. repeat x10) in a program, to produce a given outcome. I can create two or more sequences of code in a program, that run at the same time.	Repetition, loop, infinite, count-controlled, sequence, algorithm, sprite, debug.

	<p>a loop and when not to.</p> <p>I know the difference between a count-controlled and Infinite (forever) loop.</p>		
<p>Year 5</p> <p>Programming</p> <p>A – Selection</p> <p>in Physical Computing</p>	<p>I understand that a conditional statement can either be true or false.</p> <p>I know the difference between a count-controlled loop and a condition-controlled loop</p> <p>I understand that selection can be used to branch the flow of a program</p> <p>I understand that a forever (infinite) loop can be used to repeatedly check whether a condition has been met.</p>	<p>I can create a condition-controlled loop.</p> <p>I can use a condition in an 'if...then...(else)' statement to start an action (produce an outcome)</p>	<p>Crumble controller, algorithm, sequence, selection (if...then...statements), repetition, loop, count-controlled or infinite loop, conditional statement, LED, sparkle, debug.</p>
<p>Yr 5</p> <p>Programming</p> <p>B – Selection</p> <p>in Quizzes</p>	<p>I understand that a conditional statement can either be true or false.</p> <p>I know the difference between a count-controlled loop and a condition-controlled loop</p> <p>I understand that selection can be used to branch the flow of a program</p> <p>I understand that a forever (infinite) loop can be used to repeatedly check whether a condition has been met.</p>	<p>I can choose and condition and create a condition-controlled loop.</p> <p>I can use a condition in an 'if...then...(else)' statement to start an action (produce an outcome)</p>	<p>Algorithm, sequence, repetition, selection, loop, condition, count-controlled loop, condition-controlled loop.</p>
<p>Yr 6</p> <p>Programming</p> <p>A – Variables</p> <p>in Games</p>	<p>I know that a variable is something that can be used and changed in a program.</p> <p>I can identify examples of variables and recognise that variable scan be numbers or letters.</p> <p>I know that variables have specific names and its value can be used by programs to change outcomes.</p> <p>To recognise a variable can hold only one</p>	<p>I can identify variables in existing programs and experiment with changing them.</p> <p>I can decide where in a program to set a variable and use an event or input to update it.</p> <p>I can use a variable in a conditional statement to control the flow of a program.</p> <p>I can use the same variable in more than one location in. program.</p>	<p>variable, change, name, value, set, event, declare</p>

	<p>value at any one time and you cannot access the previous value.</p> <p>I recognise a variable can be set as constant (have a fixed value)</p> <p>To explain that the name of a variable needs to be unique and is meaningless to a computer</p>		
Year 6 Programming B – Sensing Movement	<p>I know that a variable is something that can be used and changed in a program.</p> <p>I can identify examples of variables and recognise that variable can be numbers or letters.</p> <p>I know that variables have specific names and its value can be used by programs to change outcomes.</p> <p>To recognise a variable can hold only one value at any one time and you cannot access the previous value.</p> <p>I recognise a variable can be set as constant (have a fixed value)</p> <p>To explain that the name of a variable needs to be unique and is meaningless to a computer</p>	<p>I can identify variables in existing programs and experiment with changing them.</p> <p>I can decide where in a program to set a variable and use an event or input to update it.</p> <p>I can use a variable in a conditional statement to control the flow of a program.</p> <p>I can use the same variable in more than one location in. program.</p>	<p>micro:bit, MakeCode, input, process, output, flashing, USB, trace, selection, condition, if then else, variable, random, sensing, accelerometer, value, compass, direction, navigation, algorithm, step counter, test, debug.</p>
